BiSole

Design Engineering Principles
“Footwear”

BiSole is an adaptable footwear concept for trail running. It provides 2 different tread patterns to enhance user performance and reduce risk of injury.

Initial Ideation

‘Transformable footwear for changes in terrain.’

After choosing to pursue footwear that adapts to changes in terrain, I started to sketch out some basic concepts. This allowed me to explore the physical attributes of certain shoe archetypes that could be transformed.

BUSK RADIO

Human Centred Design Engineering
"Urban Play for Community Building"

Busk Radio is a live streaming device, app and platform for buskers.

It allows an audience member to 'tap in' to a live performer to listen and donate from anywhere.

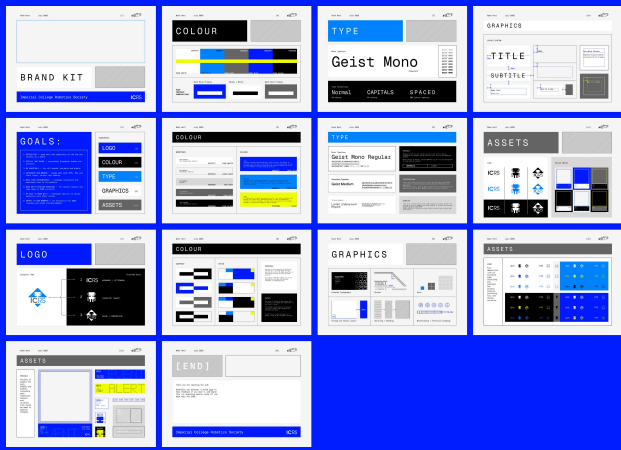

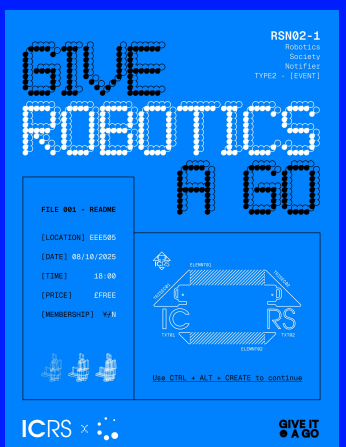

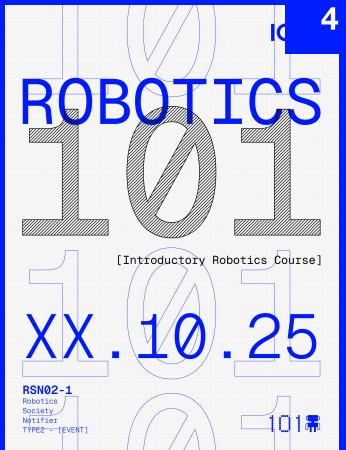

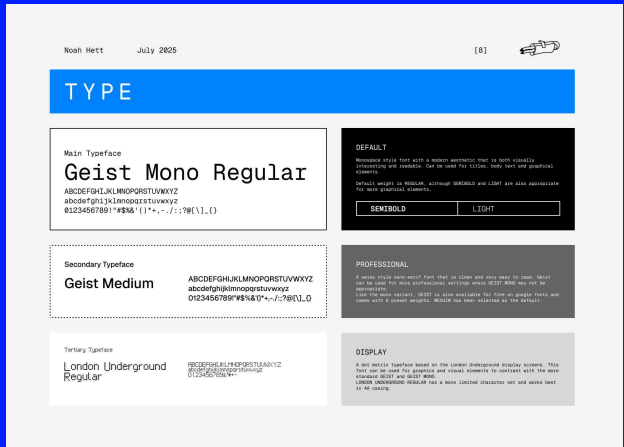

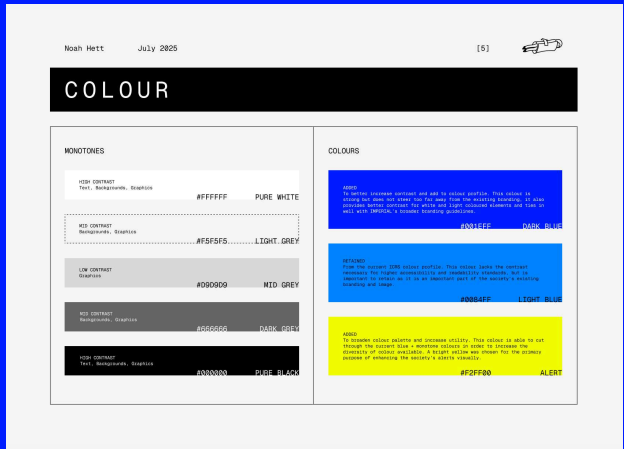

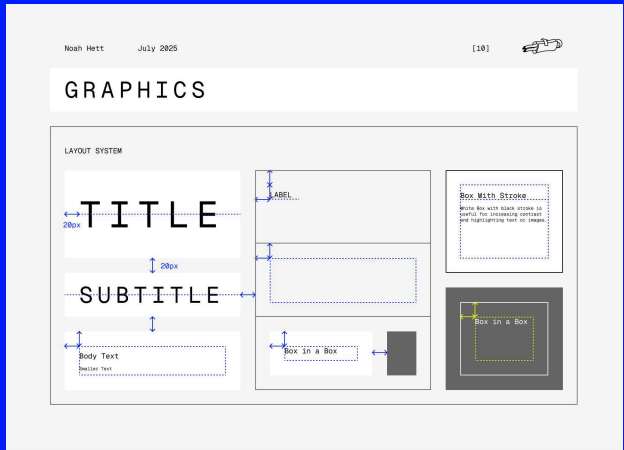

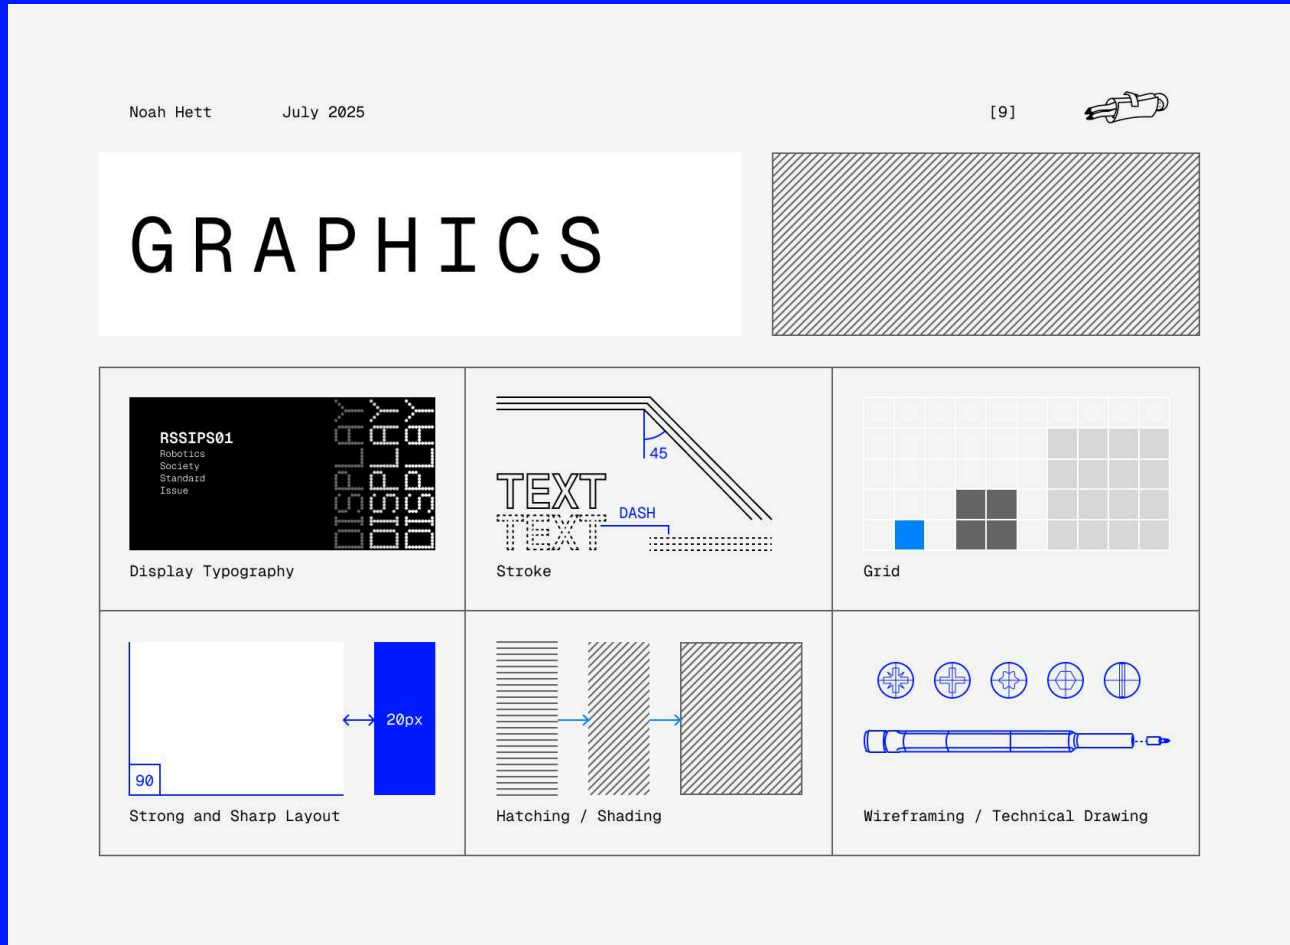

[Watch the Video here.](#)

My work in this project was focused on the UI design of the Busk Radio app. One of the main features is a 'gamified' payment system with skeuomorphic elements.
